

Yash Mehrotra . Jarvis Consulting

ML engineer with a diploma in Artificial Intelligence with Machine Learning (Humber College, 2025) and 4+ years of professional software engineering experience. Built LLM-powered applications, RAG pipelines, and agentic workflows by integrating LLM APIs, designing retrieval architectures, and building evaluation frameworks for generative AI outputs. Comfortable working across technical and non-technical teams, communicating AI concepts clearly, and delivering practical solutions to real problems.

Skills

Proficient: Python, Linux/Bash, RDBMS/SQL, Agile/Scrum, Git

Competent: RAG (Retrieval Augmented Generation), MCP (Model Context Protocol), Pytorch/Tensorflow/Scikit-learn, LLM APIs, Langchain

Familiar: Spark, Docker, Sagemaker, Databricks, Hadoop

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_YashMehrotra

Cluster Monitor [GitHub]: Developed a Cluster Monitoring Agent that allows the Linux administrator to track hardware information and resource usage across multiple nodes in a cluster using Bash scripting, PostgreSQL, Docker and Crontab to automatically gather usage statistics.

Online Sales Dataset Analysis and Restock Recommendation System [GitHub]: Perform Exploratory Data Analysis on an Online Sales Dataset, drawing out insights that inform business decisions. Trained a Machine Learning model to predict and recommend restocking quantity for future months.

Highlighted Projects

Codebase RAG Assistant [GitHub]: Built an AI Assistant that utilizes RAG pipeline with custom code chunking, sentence transformer embeddings, vector indexing, and LLM inference to answer questions from custom large C++ codebases using strict citation rules.

Domain Intelligence Agent [GitHub]: Built a modular Agentic System for analyzing data across multiple domains like finance, research and policy using a shared core architecture of planning, retrieval analysis and reporting agents.

Professional Experiences

ML Engineer, Jarvis (2026-present): Developed production-grade infrastructure tooling and data pipeline solutions across Linux, PostgreSQL, and Docker environments using Bash scripting and Agile practices.

Game Developer, Hashbyte Studio (2021-2023): Built and shipped multi-platform, multiplayer, commercial titles owning systems development, performance optimization, and platform support.

Education

Humber College (2025), Diploma, Artificial Intelligence with Machine Learning - GPA: 84.97/100.00

Jaypee University of Information Technology (2017-2021), Bachelor of Technology, Computer Science & Engineering

Miscellaneous

- Reading sci-fi/fantasy
- Developing mods for games
